AQUILA DRILLING BACK FORTY VMS PROJECT

AQUILA RESOURCES INC. (TSX-V: AQA – Frankfurt: JM4A) (“Aquila” or the “Company”) today announced that exploration drilling has commenced and is ongoing at the Back Forty Project in Menominee County, Michigan. The drill program is targeting previously discovered gold mineralization and zinc bearing volcanogenic massive sulfides. The Back Forty Project is located at the east end of the Penokean Volcanic Belt, a Proterozoic aged greenstone belt on the southern edge of the Canadian Shield.

Drilling in the current phase will test for potential extensions of massive sulfide lenses and adjacent gold mineralization. Thomas O. Quigley, President of Aquila, commented that “The Back Forty Project represents a district scale exploration project with potential for additional VMS and gold mineralization. Now that the corporate reorganization has been completed, our goal is to aggressively continue exploration at the project.”

Back Forty VMS Project

The Company controls in excess of 9,000 acres of mineral and surface rights at the Back Forty Project located in Menominee County, Michigan. Ownership of mineral interests are 100% by way of state leases, private fee surface and mineral estates subject to underlying royalty interests and applicable minority interests. Previous exploration at the project has identified massive sulfide and gold mineralization in a highly altered sequence of felsic volcanics, pyroclastic rocks and intrusive porphyries. An evaluation of the project, including a summary of previous work, is contained in a technical report dated August 17, 2005 by DeMatties and Munroe, Geological Consultants. The report is filed at www.sedar.com.
