DRILLING CONTINUES TO INTERSECT GOLD AND BASE METALS

AQUILA RESOURCES INC. (TSX:AQA–Frankfurt:JM4A) (“Aquila” or the “Company”) today announced more drill results from the Back Forty Project in the Upper Peninsula of Michigan. The results released today are from 12 drill holes targeting extensions of the South Limb and Hinge area of the Main Zone massive sulfide.

Highlights include high grade gold and silver intercepts - **5.2 meters of 13.74 grams per tonne (g/t) gold and 328.61 g/t silver**, including **1.5 meters of 44.51 g/t gold and 1082.6 g/t silver**, as well as broad zones of gold mineralization – **18.1 meters of 2.5 g/t gold and 10.1 meters of 4.04 g/t gold**.

Significant base metal intercepts included **41.1 meters of .54% copper and 2.2% zinc**.

Additional results are shown below:

Hole #	All Intervals in Meters		Est. True Width	g/t Au	g/t Ag	% Cu	% Pb	% Zn	Description	Zone**
	From	To								
LK-241	313.5	341.3	18.1	2.50	17.21	0.20	0.30	2.17	Massive, semi massive and stringers	NSL
Including	333.0	339.0	3.9	6.53	22.14	0.17	0.37	2.32	Massive, semi massive and stringers	
and	337.5	341.3	2.5	1.63	4.05	0.07	0.08	8.73	Massive, semi massive and stringers

	339.0	349.0	10.0*	1.63	79.09	0.73	0.50	0.26	Stringer sulfides	
LK-282	No significant values									SL

*Drilled thickness, true thickness unknown

**NSL = New South Limb, PM Gold = Porphyry Gold Zone, Hinge = Hinge Zone, SL = South Limb

Intercepts tabulated above include down dip extensions of South Limb mineralization, extensions of the South Limb towards the fold hinge (New South Limb), as well as westward, down plunge extensions of the Hinge area of the Main zone. Gold mineralization associated with the central porphyry – the PM Gold zone - was also encountered in LK-255. A map showing locations of the drill holes and extensions of the mineralized zones is available on the Company's website listed below.

Pending Drill Hole Results

The South Limb massive sulfide remains open down plunge and drilling is continuing to explore this direction with results from seven holes pending. An additional 16 holes are pending from expansion of the Pinwheel to the southwest and northeast, and five holes are pending from step outs of the Tuff Zone massive sulfide.

Results from an additional five holes remain to be reported from the 90 Gold Zone, and a series of five holes was also recently completed on the East Zone to fully define this important near surface gold rich gossan and massive sulfide.

Fourteen holes have also been drilled to follow up on near surface gold mineralization previously reported (Press Release January 29, 2008), which included 11.24 meters of 5.67 g/t gold, thought to be a potential new zone of precious metal mineralization located between the Pinwheel massive sulfide and gossan and the 90 Gold Zone.

Additional information about the Company's Back Forty Project is available on the Company's website at www.aquilaresources.com.

Sample preparation and analyses for this release were conducted by Accurassay Labs in Thunder Bay, Ontario on split drill core supplied by Aquila. Standards were inserted in the sample sequences with check assays and re-run's routinely conducted. Tom Quigley, P.Geo. and President of Aquila is the Qualified Person as described in National Instrument 43-101 for the Back Forty Project and is responsible for the content of this press release.
